

# Principles of Computer Science II

## Cloud Computing

Ioannis Chatzigiannakis

Sapienza University of Rome

### Lecture 9

## Virtualization

- ▶ Virtualization deals with “extending or replacing an existing interface so as to mimic the behavior of another system”
- ▶ Virtual system examples:
  - ▶ virtual private network,
  - ▶ virtual memory,
  - ▶ virtual machine,
  - ▶ ...

## Starting Point: Physical System

- ▶ Physical Hardware
  - ▶ Processors, Memory, I/O devices, ...
  - ▶ Physical resources often underutilized
  - ▶ Periods that are over-utilized
- ▶ Software:
  - ▶ Tightly coupled to Hardware,
  - ▶ Single active OS,
  - ▶ OS controls Hardware

## What is a Virtual Machine?

- ▶ Hardware-level Abstraction
  - ▶ Virtual Hardware: Processors, Memory, I/O devices, ...
  - ▶ Encapsulates all OS and application state.
- ▶ Virtualization Software:
  - ▶ Extra level of indirection decouples hardware and OS,
  - ▶ Multiplexes physical hardware across multiple “guest” VMs,
  - ▶ Strong isolation between VMs,
  - ▶ Manages physical resources, improves utilization.

## Virtual Machine Isolation

- ▶ **Secure Multiplexing:**
  - ▶ Run multiple VMs on single physical host,
  - ▶ Processor hardware isolates VMs.
- ▶ **Strong Guarantees:**
  - ▶ Software bugs, crashes, viruses within one VM cannot affect other VMs
- ▶ **Performance Isolation:**
  - ▶ Partition system resources,
  - ▶ Example: VirtualBox controls for reservation, limit, shares.

## Virtual Machine Encapsulation

- ▶ **Entire VM in a file:**
  - ▶ OS, applications, data;
  - ▶ Memory and device state.
- ▶ **Snapshots and Clones:**
  - ▶ Capture VM state on the fly and restore to point-in-time,
  - ▶ Rapid system provisioning, backup, remote mirroring.
- ▶ **Easy Content Distribution:**
  - ▶ Pre-configured apps, demos.
  - ▶ Virtual Appliances.

## Virtual Machine Compatibility

- ▶ **Hardware Independent:**
  - ▶ Physical hardware hidden by virtualization layer,
  - ▶ Standard virtual hardware exposed to VM.
- ▶ **Create Once, Run Anywhere:**
  - ▶ No configuration issues,
  - ▶ Migrate VMs between hosts.
- ▶ **Legacy Virtual Machines:**
  - ▶ Run legacy OS on new platform.

## Common Uses

- ▶ **Test and Development**
  - ▶ Rapidly provision test and development servers.
  - ▶ Store libraries of pre-configured test machines.
- ▶ **Business Continuity**
  - ▶ Reduce cost and complexity by encapsulating entire systems into single files
  - ▶ Replicated and restored on demand into any target system.
- ▶ **Enterprise Desktop**
  - ▶ Secure unmanaged PCs without compromising end-user autonomy by layering a security policy in software around desktop virtual machines.

## Common Uses

- ▶ Run legacy software on non-legacy hardware
- ▶ Run multiple operating systems on the same hardware
- ▶ Create a manageable upgrade path
- ▶ Manage outages (expected and unexpected) dynamically

## Virtualized Data Centers

Reduce costs by consolidating services onto the fewest number of physical machines

## Non-virtualized Data Centers

- ▶ Too many servers for too little work
- ▶ High costs and infrastructure needs
  - ▶ Maintenance
  - ▶ Networking
  - ▶ Floor space
  - ▶ Cooling
  - ▶ Power
  - ▶ Disaster Recovery

## Dynamic Data Centers

- ▶ Virtualization helps us break the “one service per server” model
- ▶ Consolidate many services into a fewer number of machines when workload is low, reducing costs
- ▶ Conversely, as demand for a particular service increases, we can shift more virtual machines to run that service
- ▶ We can build a data center with fewer total resources, since resources are used as needed instead of being dedicated to single services

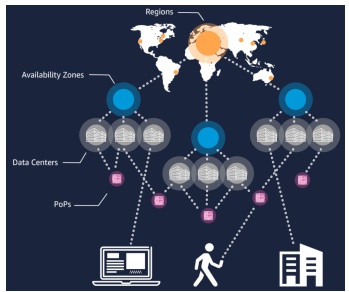

# AWS Infrastructure

# AWS Infrastructure

# AWS Infrastructure

# Introduction to AWS S3

- ▶ S3 = Simple Storage Service
  - ▶ From 0 bytes to 5 Tbytes.
- ▶ Provides a secure, durable, highly-scalable storage space.
  - ▶ AWS secures content with encryption, ACL and bucket policies.
  - ▶ AWS guarantees 99.999999999% durability (11 x 9s).
  - ▶ AWS guarantees 99.99% availability.
- ▶ We can access items stored:
  - ▶ Using the web.
  - ▶ Using the Web Console.
  - ▶ Using the Smartphone App.
  - ▶ From the Command line AWS tool.
  - ▶ Programmatically through the AWS S3 API.

## S3 Basics

- ▶ Object-based storage.
  - ▶ Files = Objects.
  - ▶ Not suitable to install an operating system or host a database.
- ▶ Files/Objects are organized in Buckets.
- ▶ Bucket names must be unique – S3 is a **universal namespace**.
  - ▶ <http://sapienza2020adm.s3.amazonaws.com/>
  - ▶ When you create a new S3 bucket, AWS creates a new web address.
- ▶ Objects (Files) have the following properties:
  - ▶ Key: the name of the object.
  - ▶ Value: the actual contents.
  - ▶ Version ID: used by the versioning system.
  - ▶ Metadata: tags that we can attach to objects.
  - ▶ ACL: who can access the object.

## S3 Storage Classes

- ▶ Free Tier – new AWS accounts
  - ▶ 5GB of S3 storage.
  - ▶ 20,000 GET – 2,000 PUT/COPY/POST/LIST
  - ▶ 15GB of Data Transfer Out each month for one year
- ▶ S3 Standard
  - ▶ \$0.0245 per GB
  - ▶ \$0.0054 per 1000 PUT/COPY/POST/LIST
  - ▶ \$0.00043 per 1000 GET/SELECT/all other requests.
- ▶ S3-IA Infrequent Access
  - ▶ \$0.0135 per GB – a minimum storage duration of 30 days.
  - ▶ \$0.01 per 1000 PUT/COPY/POST/LIST
  - ▶ \$0.001 per 1000 GET/SELECT/all other requests.
- ▶ S3 Glacier
  - ▶ \$0.0045 per GB – a minimum storage duration of 90 days.
  - ▶ \$0.06 per 1000 PUT/COPY/POST/LIST
  - ▶ \$0.00043 per 1000 GET/SELECT/all other requests.

## 3<sup>th</sup> Assignment

- ▶ <https://www.rosalind.info/>
  - ▶ Complete the following **challenges**:  
fibonacci, ins, maj, mer, 2sum, bins, ms, par, 3sum, inv, par3, med
  - ▶ <http://rosalind.info/problems/{challenge}>
- ▶ Create a GitHub repository and upload the code for each exercise.
- ▶ Email [ichatz@diag.uniroma1.it](mailto:ichatz@diag.uniroma1.it)  
Subject: [PCS2] Homework 3  
Your GitHub repository with your solutions, for all challenges.  
Also send your account user account link:  
<http://rosalind.info/users/{username}>
- ▶ **Deadline: 13/November/2020, 23:59**
